

# ANGEL LEGS

## Angel Legs M

A wearable robot that helps patients with incomplete lower extremity paralysis providing gait training on a real ground.

- Accurate 'overground' robot-assisted gait training
- Various training modes (Standing up / Sitting / Standing still / Level walking / Ascending stairs / Squatting)
- Customized brace for multiple wearers
- 20 levels of assistive joint torque
- Sensory outsole modules to detect patient's intention to walk
- Real-time training monitoring and gait data analysis per user available
